Table 1: Family-wise rejection proportions at $\alpha=0.05$

(1)	(2)	(3)	(4)
Normal errors	Multiple subgroups	Correlated errors	Lognormal errors
0.398	0.387	0.685	0.577
0.040	0.047	0.344	0.234
0.040	0.051	0.347	0.237
0.041	0.045	0.513	0.058
100	100	100	100
10	10	10	10
Y	Y	N	Y
	(1) Normal errors 0.398 0.040 0.040 0.041 100	(1) (2) Normal errors Multiple subgroups 0.398 0.387 0.040 0.047 0.040 0.051 0.041 0.045 100 100	(1) (2) (3) Normal errors Multiple subgroups Correlated errors 0.398 0.387 0.685 0.040 0.047 0.344 0.040 0.051 0.347 0.041 0.045 0.513 100 100 100 10 10 10

Notes: Table reports the fraction of 2,000 simulations where at least one null hypothesis in a family of 10 hypotheses was rejected. All hypotheses are true for the simulations reported in columns (1), (2), and (4), i.e., lower rejection rates are better. All hypotheses are false for the simulation reported in column (3), i.e., higher rejection rates are better. The Westfall-Young correction is performed using 1,000 bootstraps.
